

Your Journey to Wellness

What to Expect at ReNew Institute

1

First, we'll do a quick intake screening and make sure everything is as expected before we start.

2

After changing, your team will check in with you and talk you through the day's agenda.

3

Your primary attendant will administer localized anesthetic or other necessary medications when it's time for your procedure.

4

Your team will be by your side throughout the procedure while additional monitors and safeguards bolster your comfort and keep watch for any potential complications.

5

After your procedure, your primary attendant will keep you company while your medications wear off — you will never be left alone.

6

Before you are sent home for the day, your team will perform any necessary check-ins and immediate followup to confirm the procedure's effectiveness.

7

Your team also will provide you with a checklist of post-procedure actions you will be responsible for and schedule any followup appointments you might need.

8

You get to go home and rest at the end of the day.
